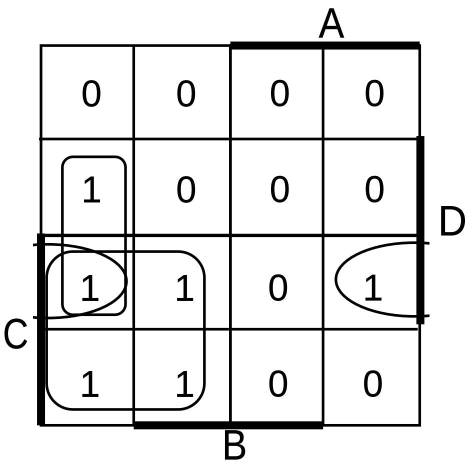
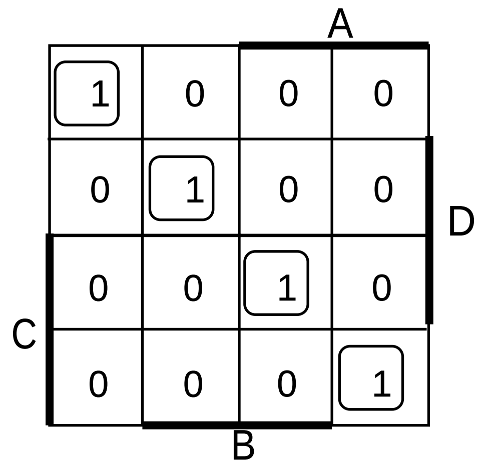
truth table

we'll need a 4-variable Karnaugh map
for each of the 3 output functions

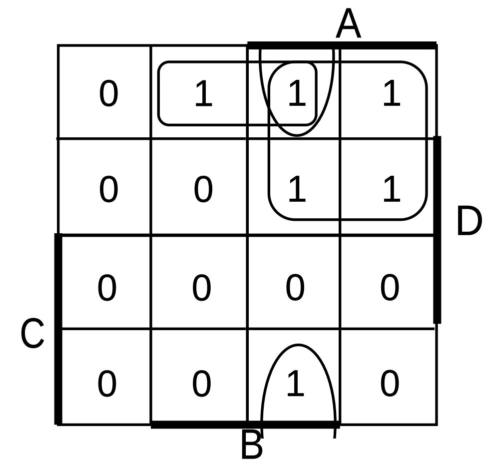
Design example: two-bit comparator (cont'd)



K-map for LT



K-map for EQ



K-map for GT

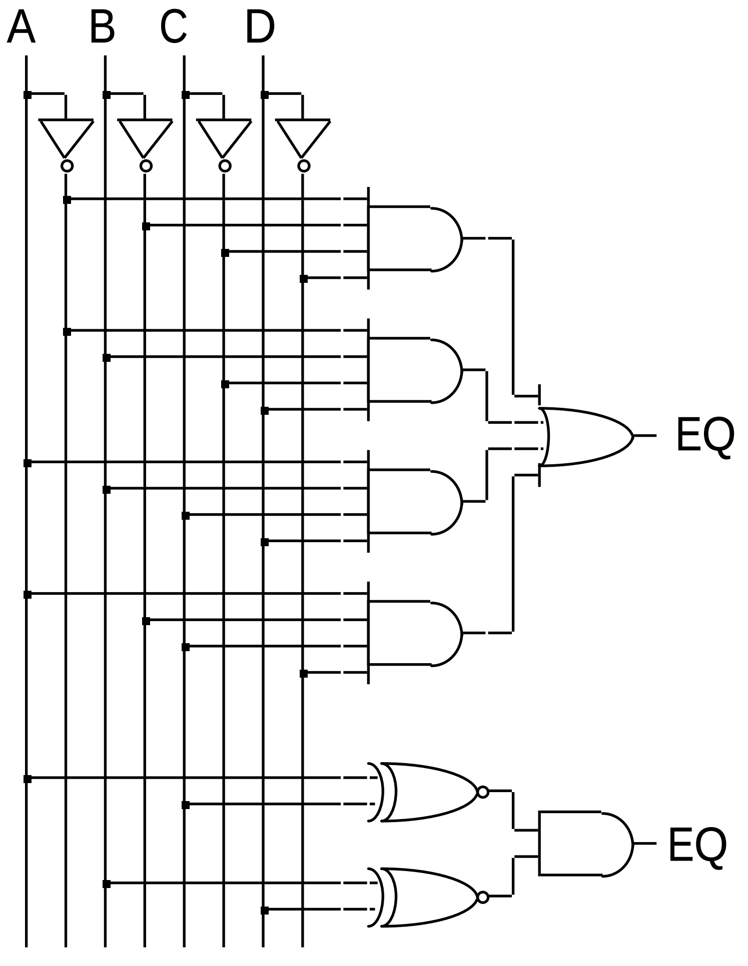
LT = A' B' D + A' C + B' C D

EQ = A' B' C' D' + A' B C' D + A B C D + A B' C D' = (A xnor C) • (B xnor D)

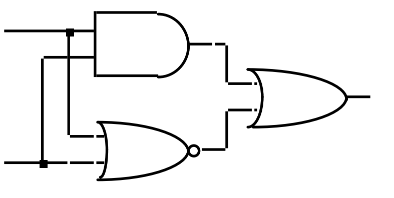
GT = B C' D' + A C' + A B D'

LT and GT are similar (flip A/C and B/D)

Design example: two-bit comparator (cont'd)



two alternative implementations of EQ with and without XOR



XNOR is implemented with at least 3 simple gates

Design example: 2x2-bit multiplier

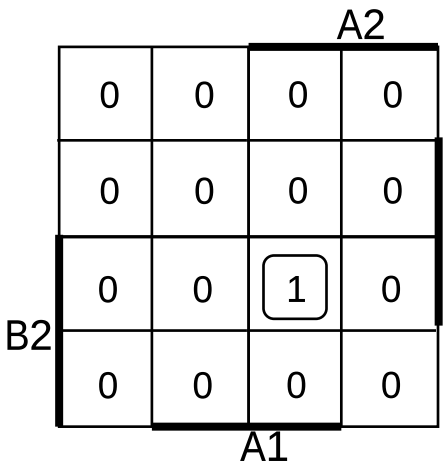
4-variable K-map
for each of the 4
output functions

Design example: 2x2-bit multiplier (cont'd)

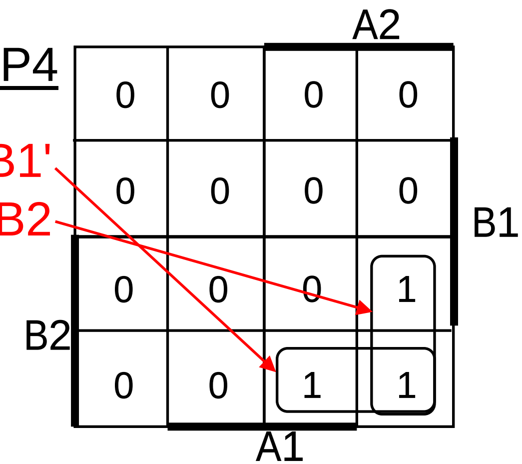


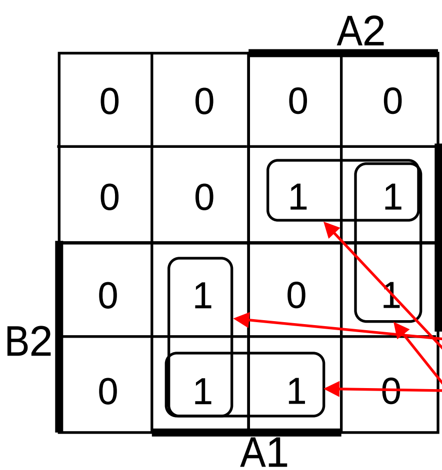
K-map for P8

P8 = A2A1B2B1

K-map for P4

P4 = A2B2B1'
+ A2A1'B2





K-map for P2

P2 = A2'A1B2
+ A1B2B1'
+ A2B2'B1
+ A2A1'B1

K-map for P1

P1 = A1B1

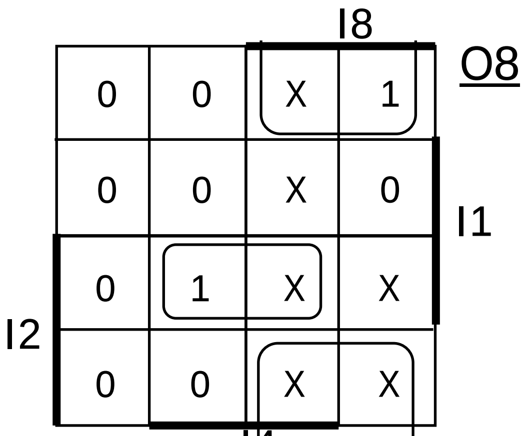
4-variable K-map for each of
the 4 output functions

Design example: BCD increment by 1 (cont’d)

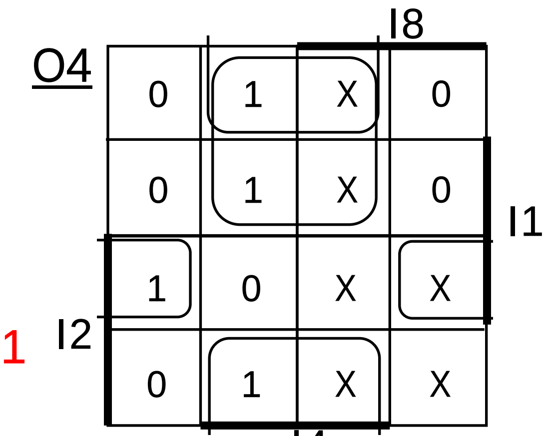


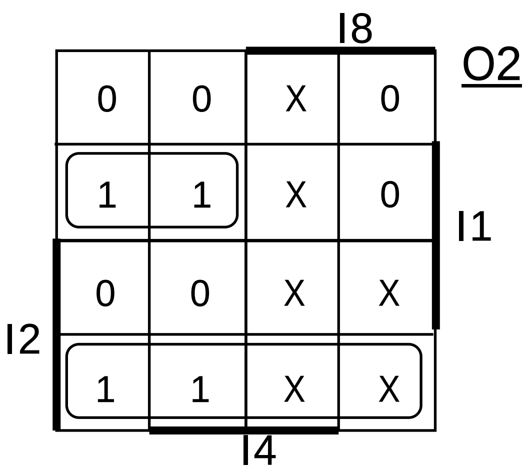
$O8 = I4\ I2\ I1 + I8\ I1'$

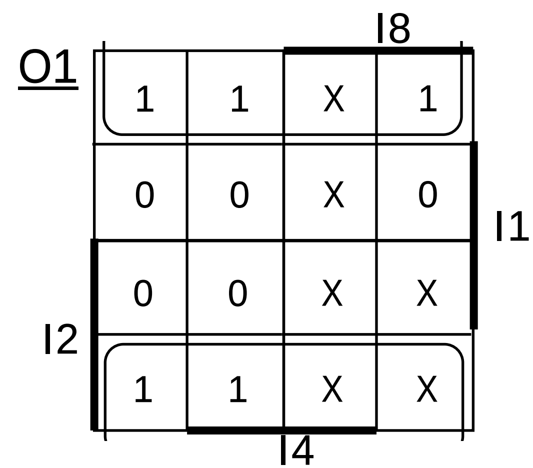
$O4 = I4\ I2' + I4\ I1' + I4'\ I2\ I1$

$O2 = I8'\ I2'\ I1 + I2\ I1'$

$O1 = I1'$



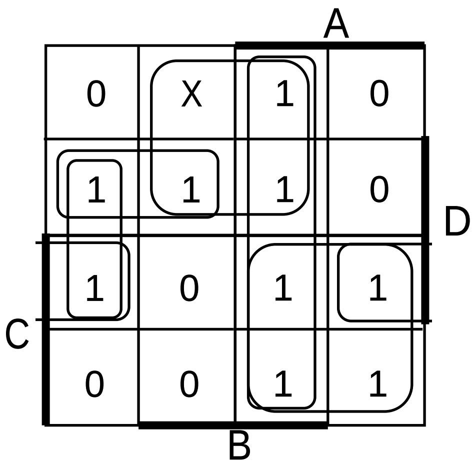




Definition of terms for two-level simplification

- Implicant
  - single element of ON-set or DC-set or any group of these elements that can be combined to form a subcube
- Prime implicant
  - implicant that can't be combined with another to form a larger subcube
- Essential prime implicant
  - prime implicant is essential if it alone covers an element of ON-set
  - will participate in ALL possible covers of the ON-set
  - DC-set used to form prime implicants but not to make implicant essential
- Objective:
  - grow implicant into prime implicants
    (minimize literals per term)
  - cover the ON-set with as few prime implicants as possible
    (minimize number of product terms)

Examples to illustrate terms



6 prime implicants:

A'B'D, BC', AC, A'C'D, AB, B'CD

essential

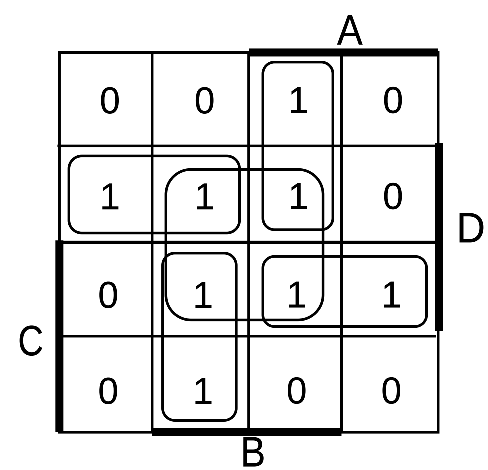
minimum cover: AC + BC' + A'B'D

5 prime implicants:

BD, ABC', ACD, A'BC, A'C'D

essential

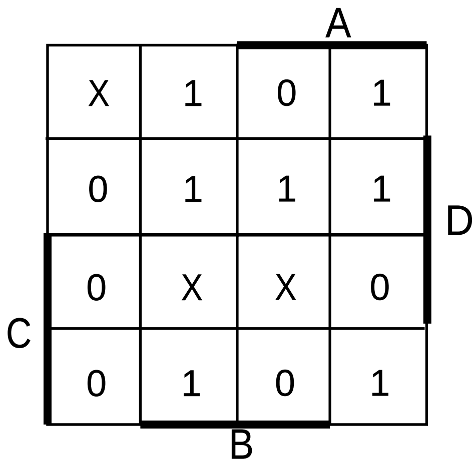
minimum cover: 4 essential implicants

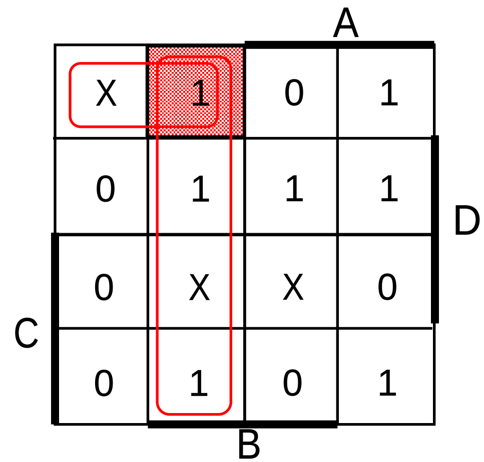


Algorithm for two-level simplification

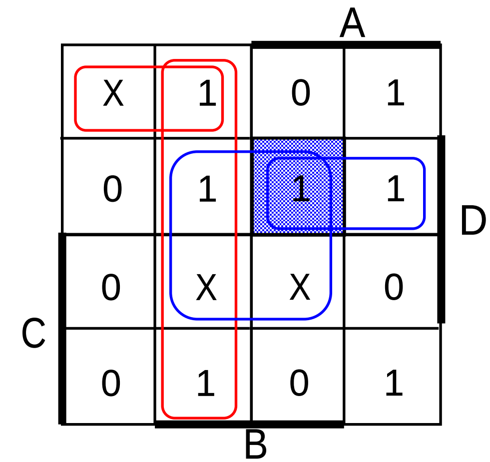
- Algorithm: minimum sum-of-products expression from a Karnaugh map
  - Step 1: choose an element of the ON-set
  - Step 2: find "maximal" groupings of 1s and Xs adjacent to that element
    - consider top/bottom row, left/right column, and corner adjacencies
    - this forms prime implicants (number of elements always a power of 2)
  - Repeat Steps 1 and 2 to find all prime implicants
  - Step 3: revisit the 1s in the K-map
    - if covered by single prime implicant, it is essential, and participates in final cover
    - 1s covered by essential prime implicant do not need to be revisited
  - Step 4: if there remain 1s not covered by essential prime implicants
    - select the smallest number of prime implicants that cover the remaining 1s

Algorithm for two-level simplification (example)

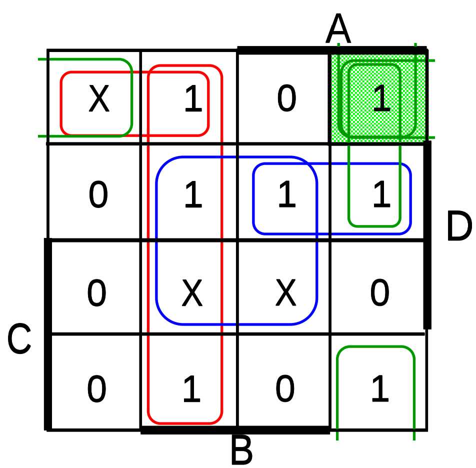




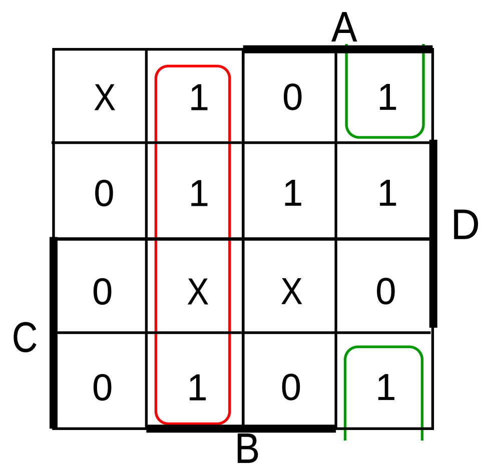
2 primes around A'BC'D'



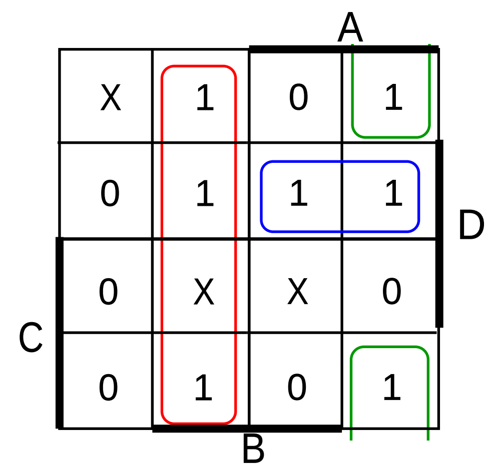
2 primes around ABC'D



3 primes around AB'C'D'



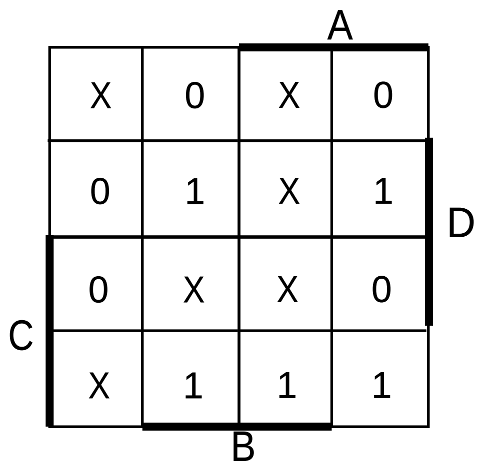
2 essential primes



minimum cover (3 primes)

Activity

- List all prime implicants for the following K-map:



- Which are essential prime implicants?
- What is the minimum cover?
